Dear Colleague:

As in previous years, our annual circular letter is to inform you about our ongoing and future activities in the area of psychosocial factors and health. This is in accordance with one of the tasks given to us in the World Health Organization's letter of designation.

1. The Laboratory, the WHO Centre and the National Institute

The Laboratory for Clinical Stress Research of the Karolinska Institutet, Stockholm, was founded in 1959 and designated the WHO Psychosocial Centre in December 1973.

Last year, in recognition of the importance of the problem area, the Government and Parliament of Sweden have also created a new National Institute for Psychosocial Factors and Health (Statens institut för psykosocial miljömedicin).

It is envisaged that this new Institute will concentrate on practical problems of Sweden, the WHO Centre on practical problems in developing countries, and the Laboratory on fundamental problems, and that these three approaches will be complementary and closely integrated.

2. Objectives

We have prepared a medium-term programme for combined laboratory and field studies of the psychosocial environment-stress-health system. The objective is to establish

- o which psychosocial stimuli are pathogenic, under what circumstances ("high risk situations"), and to whom ("high risk groups");
- o which physiological and other mechanisms ("high risk reactions") promote disease, ensuing from psychosocial stimuli;

- o what socioenvironmental modifications will increase health and wellbeing, and which should be avoided, and by whom (evaluation of health action).

3. Current research activities

Our joint research projects concern the psychosocial environment, stress and health of

- o preschool and school children (evaluation of environmental improvements, with follow-ups three and six years later);
- o elementary-school teachers (cross-sectional epidemiological study in four countries, complemented by longitudinal, intensive studies);
- o metropolitan police officers (cross-sectional epidemiological studies followed by interdisciplinary evaluation of shift system improvements);
- o engine-drivers working in shifts (neuroendocrine and EEG studies of understimulation, fatigue, performance, stress, and sleep patterns); and
- o pensioners (interdisciplinary evaluation of interventions aimed at reducing isolation and inactivity);

with the aim to identify, and wherever possible to modify, high-risk situations, high-risk groups and high-risk reactions, and to evaluate these modifications.

Additional studies concern

- o evaluation of psychosocial complements to medical care for patients with myocardial infarction;
- o psychophysiological characteristics and occupational exposures of subjects developing high blood pressure;
- o myocardial infarction risk in relation to psychosocial and physical work stress;
- o psychosocial and physical risk factors in cardiac arrhythmias and sudden cardiac death;
- o methods for measuring wellbeing/quality of life in various populations.

4. Collaboration with WHO and other organizations and institutions

The Centre has assisted the World Health Organization in the presentation and formulation of its program on psychosocial factors and health to its Executive Board, Advisory Committee on Medical Research and World Health Assembly.

Within the framework of its programme on "psychosocial factors and health", the World Health Organization headquarters in Geneva has requested (a) a position paper on life style modification strategies in multiple risk factors interventions; (b) a review on the concept of quality of life and its assessment, and (c) a review of recognition and control of adverse psychosocial factors in working life. Such documents have been or are being prepared.

The Regional Office for the Western Pacific of the World Health Organization has requested a review of "the influence of rapid urbanization on family function and child mental health", as a basis for a collaborative project in the People's Republic of China, Singapore and possibly other countries. Such a review has been prepared, in collaboration with Professor Wen Shing Tseng, Honolulu, and the national staff in China and Singapore.

The Laboratory has further taken part in a Steering Committee to study "Research on Stress in Health and Disease", at the request of the US National Academy of Sciences, Institute of Medicine. A chapter has been prepared on "Work Stress Related to Social Structures and Processes", in collaboration with Drs. Marianne Frankenhaeuser and Bertil Gardell.

We are further collaborating with the Institute of Gerontology of the Academy of Medical Sciences of the USSR to conduct complementary research on social activity and health of the aged living in and outside old people's homes. The project focuses on evaluation of interventions aiming at improvement of the situation.

5. Papers and publications from 1980 and 1981

./.
Enclosed please find a list of recent reports and reprints from our Laboratory/Centre and Institute. Please feel free to order from the list our reports and - if you can't obtain them in any other way - reprints and items, other than books. You may wish to know about two books that have been published quite recently and can be obtained through libraries and bookstores:

Levi, L. (ed.): Society, Stress and Disease: Volume 4: Working Life. Oxford, New York, Toronto: Oxford University Press, 1981. 379 pp. ISBN 0-19-264421-1. (This is the fourth volume in a series of five on various aspects of the interaction between man and his psychosocial environment.)

Levi, L.: Preventing Work Stress. Reading: Addison-Wesley Publishing Company. 1981. 151 pp. ISBN 0-201-04317-3.

6. Feed-back

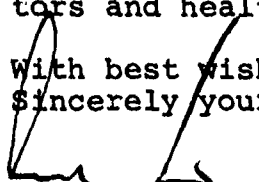

./.
We would like to take this opportunity to review our mailing list so, please, complete the enclosed short questionnaire as soon as possible and return it to me.

Please note that if your questionnaire is not returned within six weeks, your name will automatically be deleted from our mailing list.

Needless to say, we would very much appreciate obtaining your own reports and reprints within the general area of psychosocial factors and health and a continued contact with you in the New Year.

With best wishes.

Sincerely yours,

Lennart Levi, M.D.
Professor and Chairman

Director, National Institute of Psychosocial Factors and Health

PREFACE

This list of Publications is a supplement to a cumulative list dating from 1958. It covers 1980-1981 publications from The National Institute for Psychosocial Factors and Health and The Laboratory for Clinical Stress Research/WHO Research and Training Centre on Psychosocial Factors and Health.

How to use this list

The list is arranged alphabetically by author. All items have an accession number which is to be found in the left margin.

Due to shortage of funds we regret that we are not able to meet routine requests for journal articles or monographs. These should be obtained through libraries and bookstores. If, however, there is genuine difficulty in doing this, we will be able to help you with reprints of journal articles.

Items from the joint Report series of the Laboratory for Clinical Stress Research and the National Institute for Psychosocial Factors and Health can be obtained free of charge from our Documentation Department if there is no mention of a price. When ordering items from the List of Publications, please quote the accession number in the left margin. Requests should be sent to
